

# The knowledge engineering review

VOLUME 24 NUMBER 4 DECEMBER 2009

---

## Contents

Challenges for a CBR framework for argumentation in open MAS STELLA HERAS, VICENTE BOTTI and VICENTE JULIÁN	327
Computer-assisted assessment of free-text answers DIANA PÉREZ-MARÍN, ISMAEL PASCUAL-NIETO and PILAR RODRÍGUEZ	353
Recent research advances in Reinforcement Learning in Spoken Dialogue Systems MATTHEW FRAMPTON and OLIVER LEMON	375
Abstracts of Recent PhDs	409
Book Reviews	415
From the journals...	417

# The knowledge engineering review

## Notes for Contributors

### Editorial policy

The Knowledge Engineering Review has been established to provide a general source of information and analysis in all areas relevant to research and development in knowledge based systems and applied artificial intelligence. The editors wish to encourage careful preparation of original papers analysing developments in the field. In particular we wish to see tutorial and survey articles, and commentary, criticism and debate. Primary research papers on specialised technical topics are unlikely to be appropriate but research papers on broad topics such as development methodology or general evaluations of tools and techniques, are of interest. Descriptions of specific projects or particular computer systems will be considered if their presentation draws out general issues in the design, implementation or impact of knowledge based systems.

### Submission of manuscripts

Contributions for publication should be addressed to Dr Simon Parsons, Department of Computer and Information Science, Brooklyn College, City University of New York, 2900 Bedford Avenue, Brooklyn, NY 11210, USA; or Dr Peter McBurney, Department of Computer Science, Ashton Building, University of Liverpool, Liverpool L69 3BX, UK; or may be submitted through a member of the Editorial Board (addresses inside front cover). Submission implies that the manuscript has not been published previously, nor currently submitted for publication elsewhere. Upon acceptance of a manuscript, the author will be asked to transfer copyright to the publisher.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. Authors are encouraged to provide the final version of the contribution on disk (PC or Mac format, 'Word', 'Wordperfect' or Tex files) in addition to the paper copies. Please note that a style file for Tex files can be downloaded from our website at [www.journals.cambridge.org](http://www.journals.cambridge.org). Contributions should follow the general style of papers in recent issues of The Knowledge Engineering Review. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with doubleline spacing on sheets separate from the running text.

The preferred graphics package is Freehand 5 but files from many others can be accepted. Please indicate clearly the file format (e.g. TIFF, EPS, DCS, Freehand etc), computer operating system and graphics software used for originating the artwork files. The typefaces used in electronic artwork supplied should be restricted to the Monotype, Adobe and Bitstream font libraries. Illustrations should be scanned at a minimum of 320 dpi and supplied as EPS or TIFF files and never as Postscript files, or as the native format files from the graphics package used. They should be accompanied by laser proofs with the name and version number of the graphics package used, and also the names of the fonts used.

References. The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g. Gale, W A, ed 1986. *Artificial Intelligence and Statistics*, Reading, Massachusetts: Addison-Wesley. Pearl, J 1984. *Heuristics. Intelligent search strategies for problem solving*, Reading, Massachusetts: Addison-Wesley. Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* 3 (1) pp 1-34. Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems*, 3 (2) pp 100-111.

Unpublished work should normally be referred to in the text parentheses as, for example, 'private communication' or 'unpub. Ph.D. thesis, Univ. London, 1988', and not included in the reference list unless in the press.

### Proof Reading:

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

### Offprints:

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

## New and Forthcoming Titles!

**Statistical Machine Translation**

Philipp Koehn

\$60.00: Hardback: 978-0-521-87415-1: 488 pp.

**The Quest for Artificial Intelligence**

Nils J. Nilsson

"With the investigatory skill of a historian for the earliest work, personal recollections and reflections of early work, and unprecedented access to current researchers; and with the wit of a skilled author and teacher and the insight of a founding father, Nils Nilsson is uniquely qualified to present this lucid, comprehensive, entertaining and balanced history of AI."

–Peter Norvig, Director of Research, Google Inc.

"Nils's book is a tour de force that serves as a valuable hiker's guide through the twists and turns of the historical trails of the first several decades of the quest for artificial intelligence."

–Eric Horvitz, Microsoft Research and President of the AAAI

\$120.00: Hardback: 978-0-521-11639-8: 584 pp.  
\$39.99: Paperback: 978-0-521-12293-1

**Algebraic Geometry and Statistical Learning Theory**

Sumio Watanabe

*Cambridge Monographs on Applied and Computational Mathematics*

\$75.00: Hardback: 978-0-521-86467-1: 300 pp.

**Machine Learning Methods in the Environmental Sciences**

Neural Networks and Kernels

William W. Hsieh

\$65.00: Hardback: 978-0-521-79192-2: 364 pp.

**Search User Interfaces**

Marti A. Hearst

"If you want to design innovative search user interfaces, you need this book close at hand at all times."

–Keith Instone, Information Architecture Lead, IBM.com User Experience Design

"Marti Hearst has written an impressively comprehensive and authoritative account of search interfaces, bringing together the state of the art in search sites with the large and rapidly growing body of scientific research that explains what works and why. This book will be an invaluable resource for anyone who wants to get below the surface of search — to analyze and create search interfaces and to understand the full range of issues, problems, and new potentials for design."

–Terry Winograd, Stanford University  
\$50.00: Hardback: 978-0-521-11379-3: 408 pp.

**Modeling and Reasoning with Bayesian Networks**

Adnan Darwiche

"Bayesian networks are as important to AI and machine learning as Boolean circuits are to computer science. Adnan Darwiche is a leading expert in this area and this book provides a superb introduction to both theory and practice, with much useful material not found elsewhere."

–Stuart Russell, University of California, Berkeley  
\$95.00: Hardback: 978-0-521-88438-9: 560 pp.

**Constraint Handling Rules**

Thom Frühwirth

\$85.00: Hardback: 978-0-521-87776-3: 320 pp.

**Aggregation Functions**

Michel Grabisch, Jean-Luc Marichal, Radko Mesiar, and Endre Pap

*Encyclopedia of Mathematics and its Applications*

\$120.00: Hardback: 978-0-521-51926-7: 478 pp.

**Multiagent Systems**

Algorithmic, Game-Theoretic, and Logical Foundations

Yoav Shoham

and Kevin Leyton-Brown

"Multiagent Systems presents for the first time [this] cutting-edge research in a textbook form. The book transcends the traditional boundaries of artificial intelligence and touches all aspects of multiagent systems: from artificial intelligence to algorithms to game theory, to logic, and beyond. Written by leaders in this research area, this book is certain to become the textbook of choice for classes on multiagent systems."

–Noam Nisan, Hebrew University  
\$60.00: Hardback: 978-0-521-89943-7: 504 pp.

**Introduction to Information Retrieval**

Christopher D. Manning, Prabhakar Raghavan, and Hinrich Schütze

"Through compelling exposition and choice of topics, the authors vividly convey both the fundamental ideas and the rapidly expanding reach of information retrieval as a field."

–Jon Kleinberg, Professor of Computer Science, Cornell University  
\$61.00: Hardback: 978-0-521-86571-5: 496 pp.

*Prices subject to change.*
