

The knowledge engineering review

VOLUME 26 NUMBER 1 MARCH 2011

Contents

A quarter-century of <i>The Knowledge Engineering Review</i> : Introduction to the Special Issue PETER MCBURNEY, SIMON PARSONS and MIRKO VIROLI	1
Formalizing knowledge and expertise: where have we been and where are we going? JOHN FOX	5
Robotics competitions as benchmark for AI research JOHN ANDERSON, JACKY BALTES and CHI TAI CHENG	11
From expert systems to context-based intelligent assistant systems: a testimony PATRICK BRÉZILLON	19
Data mining: past, present and future FRANS COENEN	25
Ayurveda for agents: an attempt to bring the sciences of natural and artificial intelligence closer together ROGIER M. VAN EIJK	31
On the evolving relation between Belief Revision and Argumentation MARCELO A. FALAPPA, ALEJANDRO J. GARCÍA, GABRIELE KERN-ISBERNER and GUILLERMO R. SIMARI	35
Interactive knowledge capture in the new millennium: how the Semantic Web changed everything YOLANDA GIL	45
Coordination models and languages: from parallel computing to self-organisation ANDREA OMICINI and MIRKO VIROLI	53
Logical mechanism design IYAD RAHWAN and KATE LARSON	61
Book Review	71
From the journals...	73

The knowledge engineering review

Notes for Contributors

Editorial policy

The Knowledge Engineering Review has been established to provide a general source of information and analysis in all areas relevant to research and development in knowledge based systems and applied artificial intelligence. The editors wish to encourage careful preparation of original papers analysing developments in the field. In particular we wish to see tutorial and survey articles, and commentary, criticism and debate. Primary research papers on specialised technical topics are unlikely to be appropriate but research papers on broad topics such as development methodology or general evaluations of tools and techniques, are of interest. Descriptions of specific projects or particular computer systems will be considered if their presentation draws out general issues in the design, implementation or impact of knowledge based systems.

Submission of manuscripts

Contributions for publication should be submitted as PDF files in an email attachment to either Professor Simon Parsons, Department of Computer and Information Science, Brooklyn College, City University of New York (parsons@sci.brooklyn.cuny.edu) or to Dr Peter McBurney, Department of Computer Science, University of Liverpool, UK (mcburney@liverpool.ac.uk). Submission implies that the manuscript has not been published previously, nor currently submitted for publication elsewhere. Upon acceptance of a manuscript, the author will be asked to transfer copyright to the publisher.

All contributions, whether articles, correspondence or reviews, must be sent in electronic form. Authors are encouraged to provide the final version of the contribution in LaTeX, TeX, or Word format.

Authors using LaTeX should ideally use the KER LaTeX style file which can be obtained using anonymous FTP from the internet address <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/ker-cls>. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact texline@cup.cam.ac.uk. Tables and figures should be embedded in the article in the usual way, with figures in .eps form, which should be also supplied as separate files.

Contributions should follow the general style of papers in recent issues of The Knowledge Engineering Review. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract.

If you are not using the ker.cls file, then please adopt the following layout rules. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with Arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The preferred graphics package is Freehand 5 but files from many others can be accepted. Please indicate clearly the file format (e.g. TIFF, EPS, DCS, Freehand etc), computer operating system and graphics software used for originating the artwork files. The typefaces used in electronic artwork supplied should be restricted to Monotype, Adobe and Bitstream font libraries. Illustrations should be supplied as EPS files and never as Postscript files, or as the native format files from the graphics package used. They should be accompanied by laser proofs with the name and version number of the graphics package used, and also the names of the fonts used.

References

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.:

Gale, W A, ed 1986. *Artificial Intelligence and Statistics*, Reading, Massachusetts: Addison-Wesley.

Pearl, J 1984. *Heuristics. Intelligent search strategies for problem solving*, Reading, Massachusetts: Addison-Wesley.

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* 3 (1) pp 1–34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems*, 3 (2) pp 100–111.

Unpublished work should normally be referred to in the text parentheses as, for example, 'private communication' or 'unpub. Ph.D. thesis, Univ. London, 1988', and not included in the reference list unless in the press.

Proof Reading:

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

Offprints:

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

Software Modeling and Design

UML, Use Cases, Patterns, and Software Architectures

Hassan Gomaa

“This is a ‘must have’ book for any senior technologist actively involved in the software development life cycle. It provides not only principles of software architecture, design and development but also practical examples of how to apply these techniques to produce high-quality, maintainable and extensible software. Dr. Gomaa, a recognized thought leader in software engineering, hits another home run with this volume.”

—Mark Gianturco, *Intelligent Discovery Solutions*

\$75.00: Hardback: 978-0-521-76414-8: 592 pp.

Research Methods for Science

Michael P. Marder

Contents:

1. Curiosity and research; 2. Overview of experimental analysis and design; 3. Statistics; 4. Mathematical models; 5. Scientific information; Appendices; Index.

\$25.99: Paperback: 978-0-521-14584-8: 240 pp.

The Elements of MATLAB Style

Richard K. Johnson

The Elements of MATLAB Style is a guide for both new and experienced MATLAB programmers that offers a collection of standards and guidelines for creating solid MATLAB code that will be easy to understand, enhance, and maintain. This is the only book devoted to MATLAB style and best programming practices.

\$19.99: Paperback: 978-0-521-73258-1: 184 pp.

Steps in Scala

An Introduction to Object-Functional Programming

Christos K. K. Loverdos, Apostolos Syropoulos

Contents:

Preface; 1. Introduction; 2. Core features; 3. Advanced features; 4. Parser builders; 5. XML processing; 6. GUI programming; 7. Concurrent programming; 8. On paths and a bit of algebraic abstractions; 9. Virtual files coming into existence; 10. Compositional file matching; 11. Searching, iterating, traversing; 12. The expression problem; 13. A computer algebra system; Appendix A. Multimedia processing; Appendix B. Distributing a Scala application along with Scala itself; Appendix C. Working with the compiler and the interpreter; Appendix D. Scala's grammar; References; Author index; Subject index.

\$99.00: Hardback: 978-0-521-76217-5: 504 pp.

\$50.00: Paperback: 978-0-521-74758-5

Prices subject to change.

CAMBRIDGE

JOURNALS

Combinatorics, Probability and Computing

Editor-in-Chief

Béla Bollobás, *DPMMS, Cambridge, UK; University of Memphis, USA*

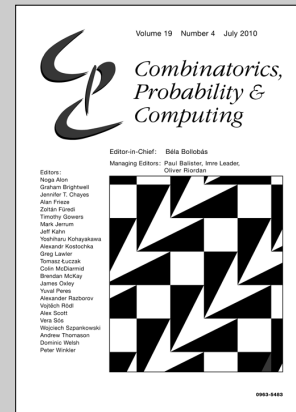

Published bimonthly, *Combinatorics, Probability & Computing* is devoted to the three areas of combinatorics, probability theory and theoretical computer science. Topics covered include classical and algebraic graph theory, extremal set theory, matroid theory, probabilistic methods and random combinatorial structures; combinatorial probability and limit theorems for random combinatorial structures; the theory of algorithms (including complexity theory), randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

JOURNALS

Journal of Functional Programming

Editors-in-Chief

Matthias Felleisen, *Northeastern University, USA*

Xavier Leroy, *INRIA Rocquencourt, France*

The *Journal of Functional Programming* is the only journal devoted solely to the design, implementation, and application of functional programming languages, spanning the range from mathematical theory to industrial practice. Topics covered include functional languages and extensions, implementation techniques, reasoning and proof, program transformation and synthesis, type systems, type theory, language-based security, memory management, parallelism and applications. The journal is of interest to computer scientists, software engineers, programming language researchers and mathematicians interested in the logical foundations of programming.
