

The knowledge engineering review

VOLUME 26 NUMBER 2 JUNE 2011

Contents

Learning Bayesian networks: approaches and issues RÓNÁN DALY, QIANG SHEN and STUART AITKEN	99
Informal logic dialogue games in human–computer dialogue TANGMING YUAN, DAVID MOORE, CHRIS REED, ANDREW RAVENSCROFT and NICOLAS MAUDET	159
Adaptive organizational changes in agent-oriented methodologies LUCA CERNUZZI and FRANCO ZAMBONELLI	175
On the use of agent technology in intelligent, multisensory and distributed surveillance JOSÉ M. GASCUEÑA and ANTONIO FERNÁNDEZ-CABALLERO	191
Learning like a baby: a survey of artificial intelligence approaches FRANK GUERIN	209
Book Review	237
Abstracts of Recent PhDs	239

The knowledge engineering review

Notes for Contributors

Editorial policy

The Knowledge Engineering Review has been established to provide a general source of information and analysis in all areas relevant to research and development in knowledge based systems and applied artificial intelligence. The editors wish to encourage careful preparation of original papers analysing developments in the field. In particular we wish to see tutorial and survey articles, and commentary, criticism and debate. Primary research papers on specialised technical topics are unlikely to be appropriate but research papers on broad topics such as development methodology or general evaluations of tools and techniques, are of interest. Descriptions of specific projects or particular computer systems will be considered if their presentation draws out general issues in the design, implementation or impact of knowledge based systems.

Submission of manuscripts

Contributions for publication should be submitted as PDF files in an email attachment to either Professor Simon Parsons, Department of Computer and Information Science, Brooklyn College, City University of New York (parsons@sci.brooklyn.cuny.edu) or to Dr Peter McBurney, Department of Computer Science, University of Liverpool, UK (mcburney@liverpool.ac.uk). Submission implies that the manuscript has not been published previously, nor currently submitted for publication elsewhere. Upon acceptance of a manuscript, the author will be asked to transfer copyright to the publisher.

All contributions, whether articles, correspondence or reviews, must be sent in electronic form. Authors are encouraged to provide the final version of the contribution in LaTeX, TeX, or Word format.

Authors using LaTeX should ideally use the KER LaTeX style file which can be obtained using anonymous FTP from the internet address <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/ker-cls>. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact texline@cup.cam.ac.uk. Tables and figures should be embedded in the article in the usual way, with figures in .eps form, which should be also supplied as separate files.

Contributions should follow the general style of papers in recent issues of The Knowledge Engineering Review. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract.

If you are not using the ker.cls file, then please adopt the following layout rules. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with Arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The preferred graphics package is Freehand 5 but files from many others can be accepted. Please indicate clearly the file format (e.g. TIFF, EPS, DCS, Freehand etc), computer operating system and graphics software used for originating the artwork files. The typefaces used in electronic artwork supplied should be restricted to Monotype, Adobe and Bitstream font libraries. Illustrations should be supplied as EPS files and never as Postscript files, or as the native format files from the graphics package used. They should be accompanied by laser proofs with the name and version number of the graphics package used, and also the names of the fonts used.

References

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.:

Gale, W A, ed 1986. *Artificial Intelligence and Statistics*, Reading, Massachusetts: Addison-Wesley.

Pearl, J 1984. *Heuristics. Intelligent search strategies for problem solving*, Reading, Massachusetts: Addison-Wesley.

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* 3 (1) pp 1–34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems*, 3 (2) pp 100–111.

Unpublished work should normally be referred to in the text parentheses as, for example, 'private communication' or 'unpub. Ph.D. thesis, Univ. London, 1988', and not included in the reference list unless in the press.

Proof Reading:

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

Offprints:

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

Forthcoming...

Bayesian Reasoning and Machine Learning

David Barber

“With approachable text, examples, exercises, guidelines for teachers, a MATLAB toolbox and an accompanying web site, *Bayesian Reasoning and Machine Learning* by David Barber provides everything needed for your machine learning course. Only students not included.”

—*Jaakko Hollmén, Aalto University*

\$85.00: Hb: 978-0-521-51814-7: 650 pp.

Bayesian Time Series Models

Edited by David Barber, A. Taylan Cemgil, and Silvia Chiappa

The first unified treatment of time series modeling techniques spanning machine learning, statistics, engineering and computer science.

\$78.00: Hb: 978-0-521-19676-5: 450 pp.

Prices subject to change.

Machine Ethics

Edited by Michael Anderson and Susan Leigh Anderson

The subject of this book is a new field of research: developing ethics for machines, in contrast to developing ethics for human beings who use machines. The essays in this volume represent the first steps by philosophers and artificial intelligence researchers toward explaining why it is necessary to add an ethical dimension to machines that function autonomously.

\$99.00: Hb: 978-0-521-11235-2: 546 pp.

Phase Transitions in Machine Learning

Lorenza Saitta, Attilio Giordana, and Antoine Cornuéjols

\$90.00: Hb: 978-0-521-76391-2: 416 pp.

Multibiometrics for Human Identification

Edited by Bir Bhanu and Venu Govindaraju

\$90.00: Hb: 978-0-521-11596-4: 408 pp.

Face Geometry and Appearance Modeling

Concepts and Applications

Zicheng Liu and Zhengyou Zhang

\$80.00: Hb: 978-0-521-89841-6: 320 pp.

Graph-based Natural Language Processing and Information Retrieval
